

funraisin

Web Developer

Join the engineering force behind world-leading nonprofit software and surround yourself with smart, passionate people who are helping the changemakers save the world!

About us:

- We make awesome fundraising software for charities to run events, collect donations, sell tickets and much more
- We're an innovative, socially responsible tech company with offices in Sydney, London and San Diego
- We work with the changemakers who are on the frontlines of solving the big issues; from feeding the homeless through to curing cancer
- We're one of the fastest-growing tech startups internationally in the impact sector

Our co-founders started in the 90's creating the online presence and cool digital experiences for leading global brands such as Coca-Cola, American Express and Louise Vuitton across the UK, Europe and Australia. They saw what charities missed - the control and freedom that comes with high-quality digital tools that help raise more money, and build better connections to audiences.

Since then our tech-for-good digital platform and operations have grown fast - we now help raise hundreds of millions for charities each year, and have offices in Sydney Australia, London UK and San Diego USA.

Our vision is to transform charities digital fundraising so they can raise more money and tackle our worlds greatest challenges. We do this by creating tools that empower charities to produce high-quality digital content and events. We think in terms of 'limitless digital potential' for our charity customers - what we build provides freedom for charities now and into the future. We're energetic and ambitious, we have lots of fun and we're in it to make this world a better place for us all.

Our DNA is in digital - high-quality digital production, providing limitless digital platform capabilities (*yes, we want to build technology that is limitless, works for charities now, and in the future without tech dept*) and making everything super easy for organisations, fundraisers and donors whether its platform-based or working with our team. We are energetic, ambitious and we have lots of fun.

About you and the role:

- Experience with a wide variety of CMS systems (Wordpress, Drupal, Magento etc)
- Strong technical skills in PHP, jQuery, CSS3, HTML5, JavaScript and AJAX
- In-depth knowledge of Bootstrap with either LESS or Sass
- Strong experience in implementing responsive design
- Experience using Photoshop for the purpose of turning design files into production files
- Experience using/understanding of modern relational databases such as Mysql, Maria DB
- You can perform browser testing and ensure cross-browser compatibility
- You can write well organised and sustainable code
- Experience using responsive CMS page builder interfaces
- You'll be keen on contributing to the growth of the software by rolling out improvements to inbuilt donation templates, updates to modules like online charity events, ticketing, shops and more, all to help charities raise money

Some of the benefits

- Competitive salary
- Flexibility with hours
- Future international travel for the right person
- Opportunity to join one of the fastest-growing tech startups in the impact sector
- Your work will impact hundreds of charities globally

What to do next

We'll need to see some example sites you've built so please include URLs of those in your application.

And give us a cover letter with a quick intro about who you are and what you're looking for!

We're looking forward to hearing from you.
